## Objective

# User Page

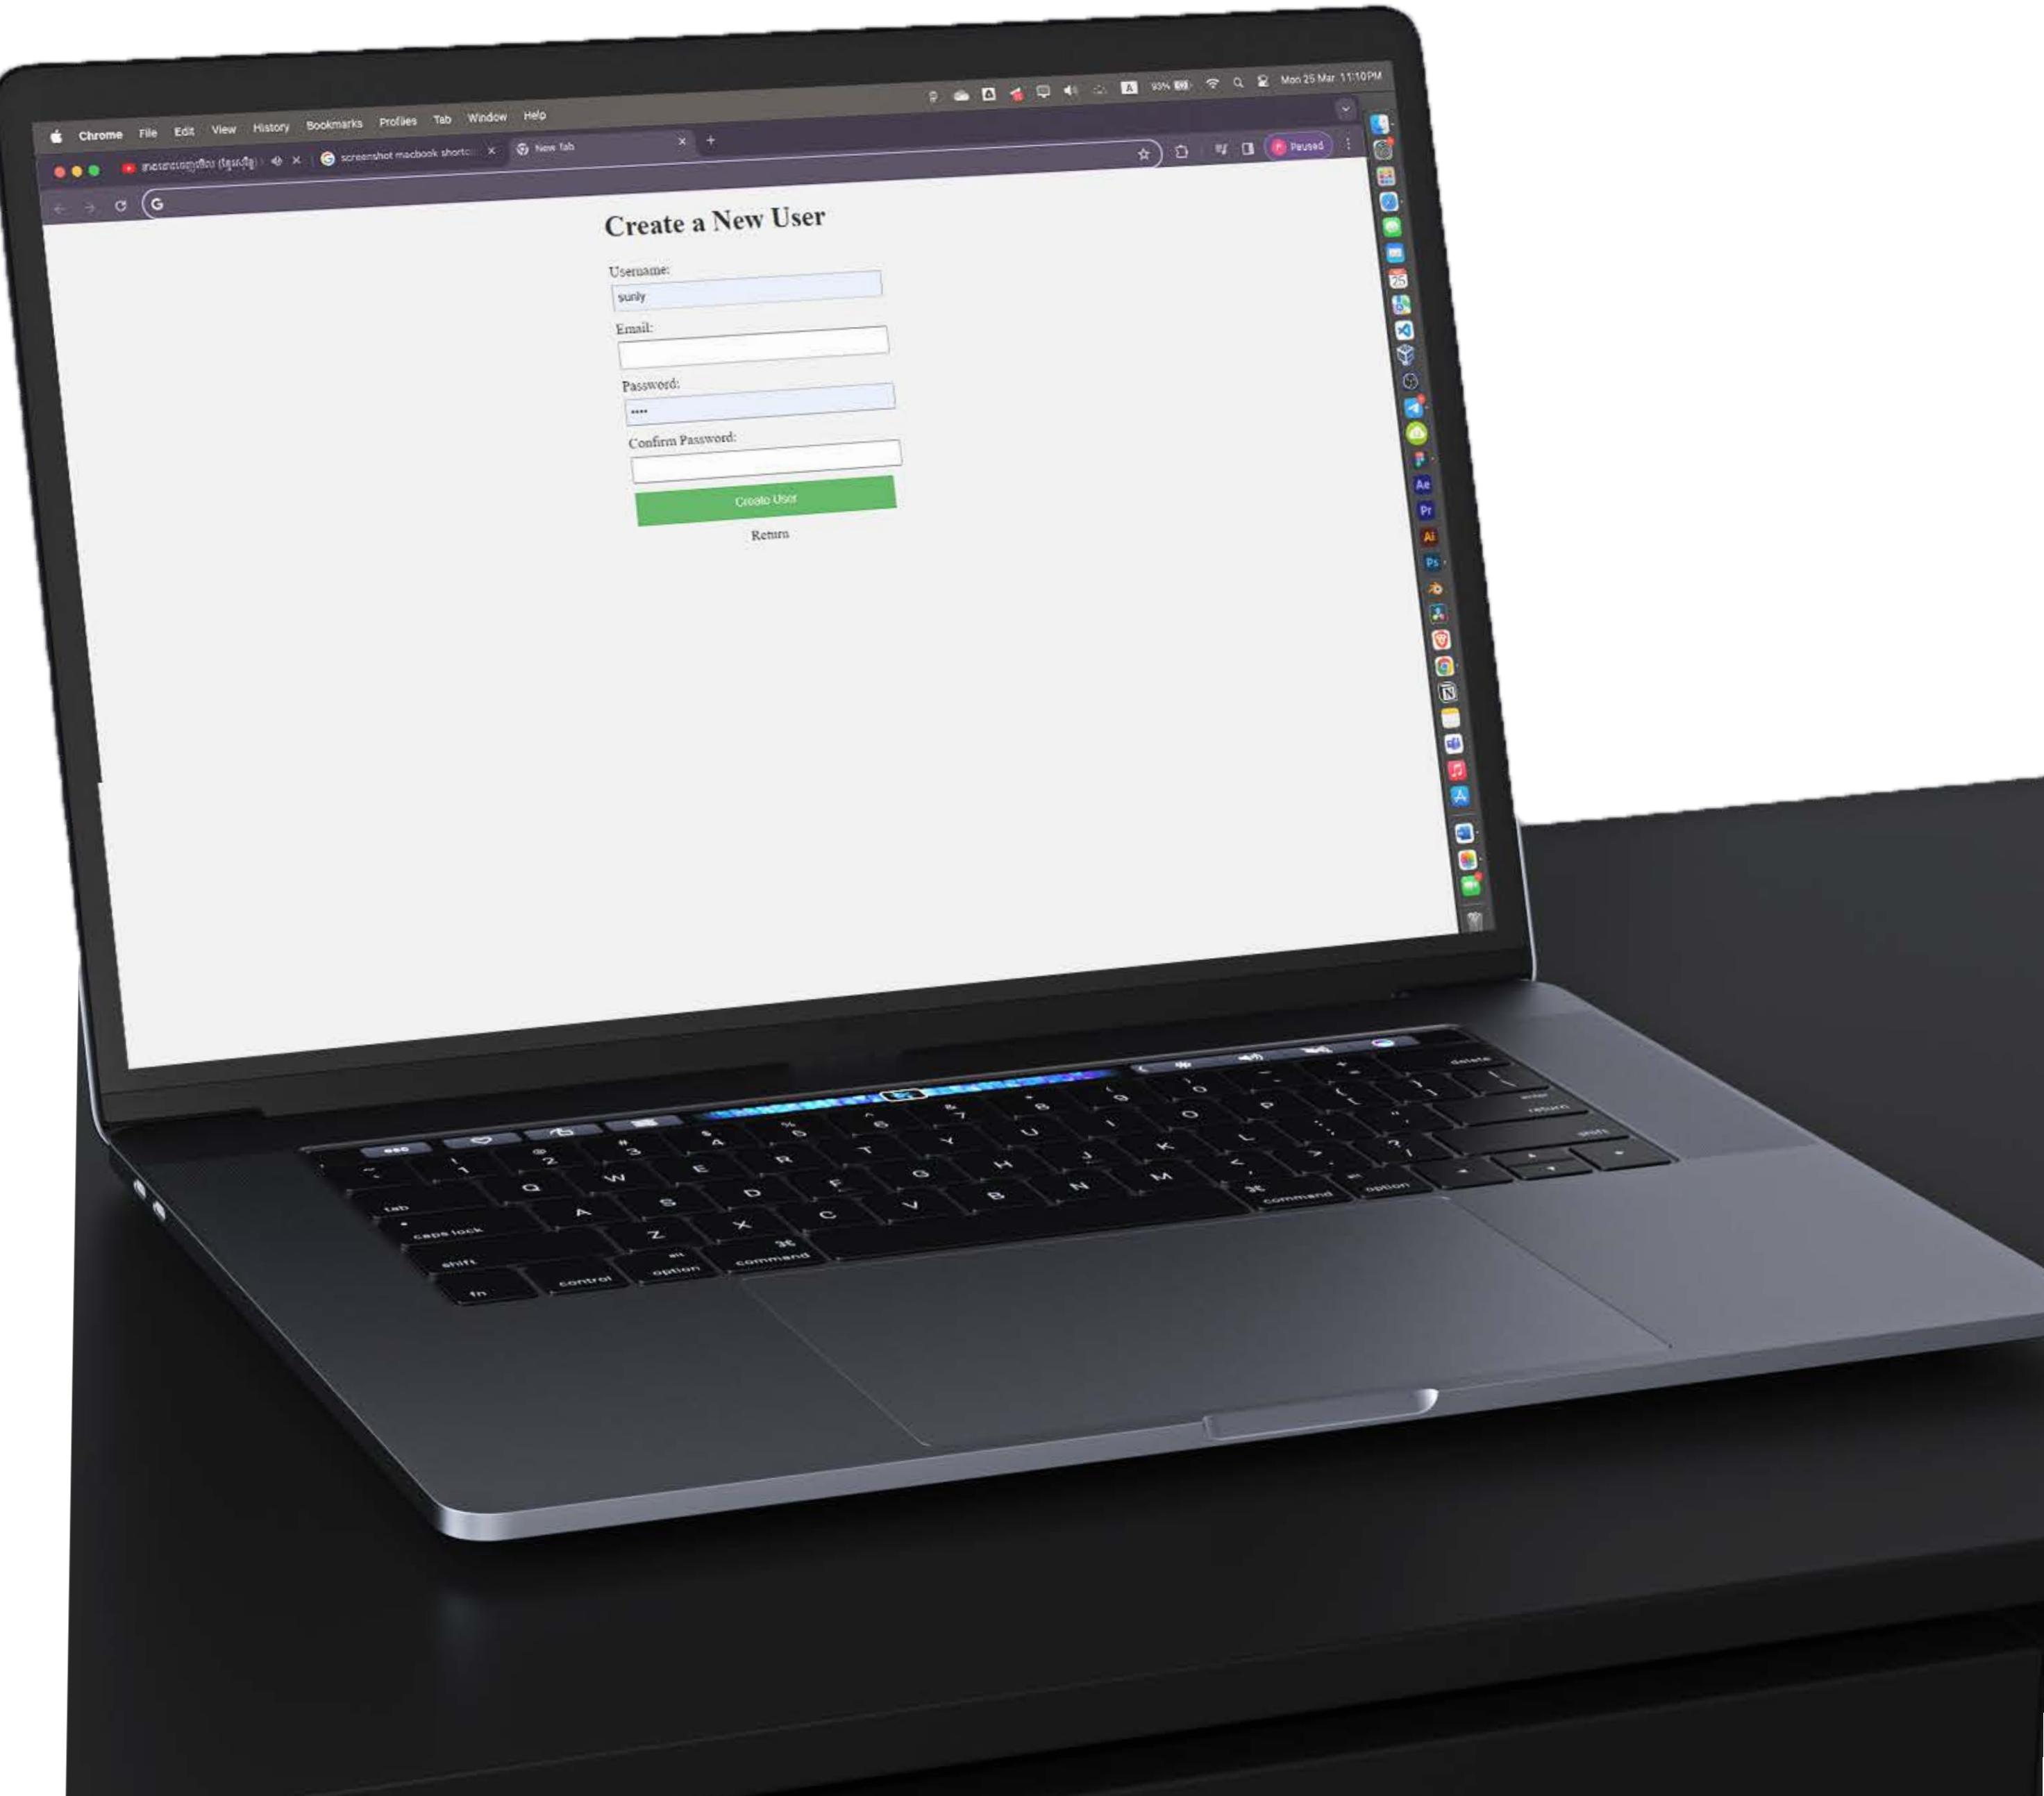

- User page (User can check all courses they want to study  
User can Sign up and login to save courses and check total price of courses they want to buy)
- User register
- User Login
- User add to cart
- Check User Cart
- Admin Page  
(Admin can login and preview both admin and user page  
Admin Can turn on off courses to display  
Admin Can add edit and delete courses)
- Upload item
- Edit item
- Delete Item
- Enable/Disable Item

Objective

# User Register

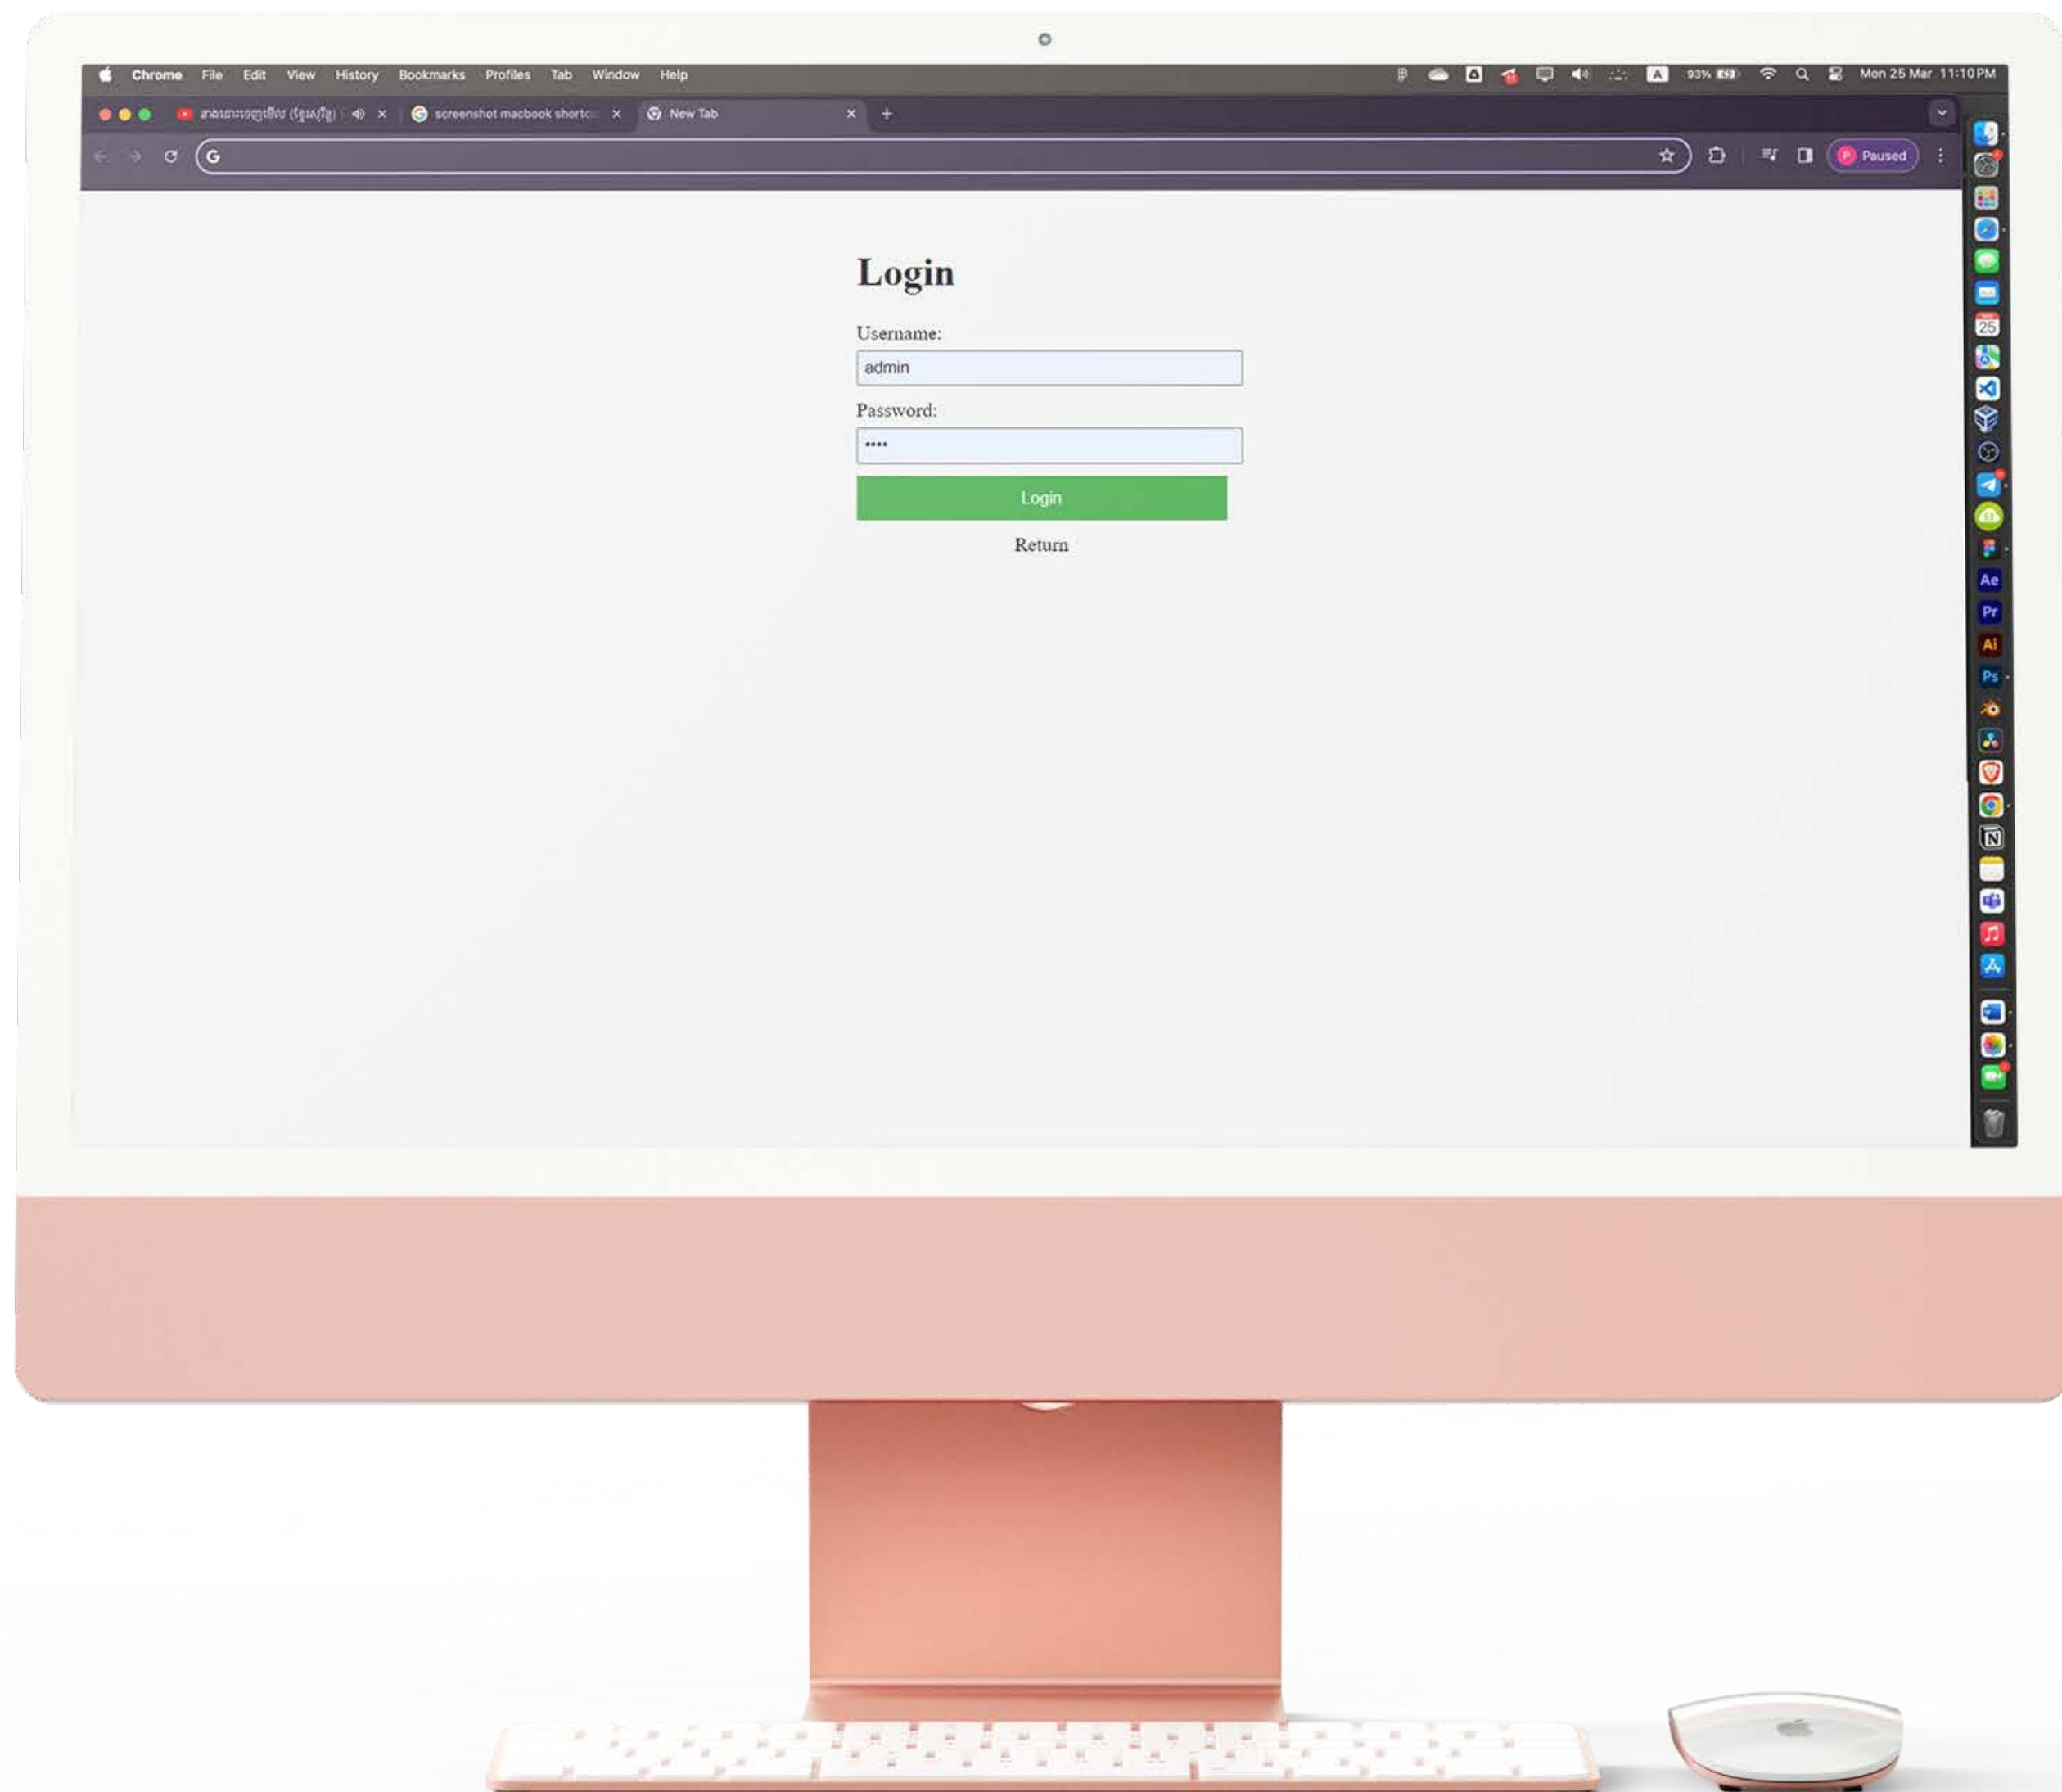

- Creating a registration page for a website allows users to create accounts, log in, and access personalized content or features. It helps to enhance user experience, provide security, and collect user data for better customization and communication.

## Objective

# User Login

- Creating a login page for a website is important to authenticate users and provide access to personalized content, features, or account information. It helps to ensure security, protect user data, and offer a personalized experience based on individual preferences and settings.

Objective

# User Add to cart

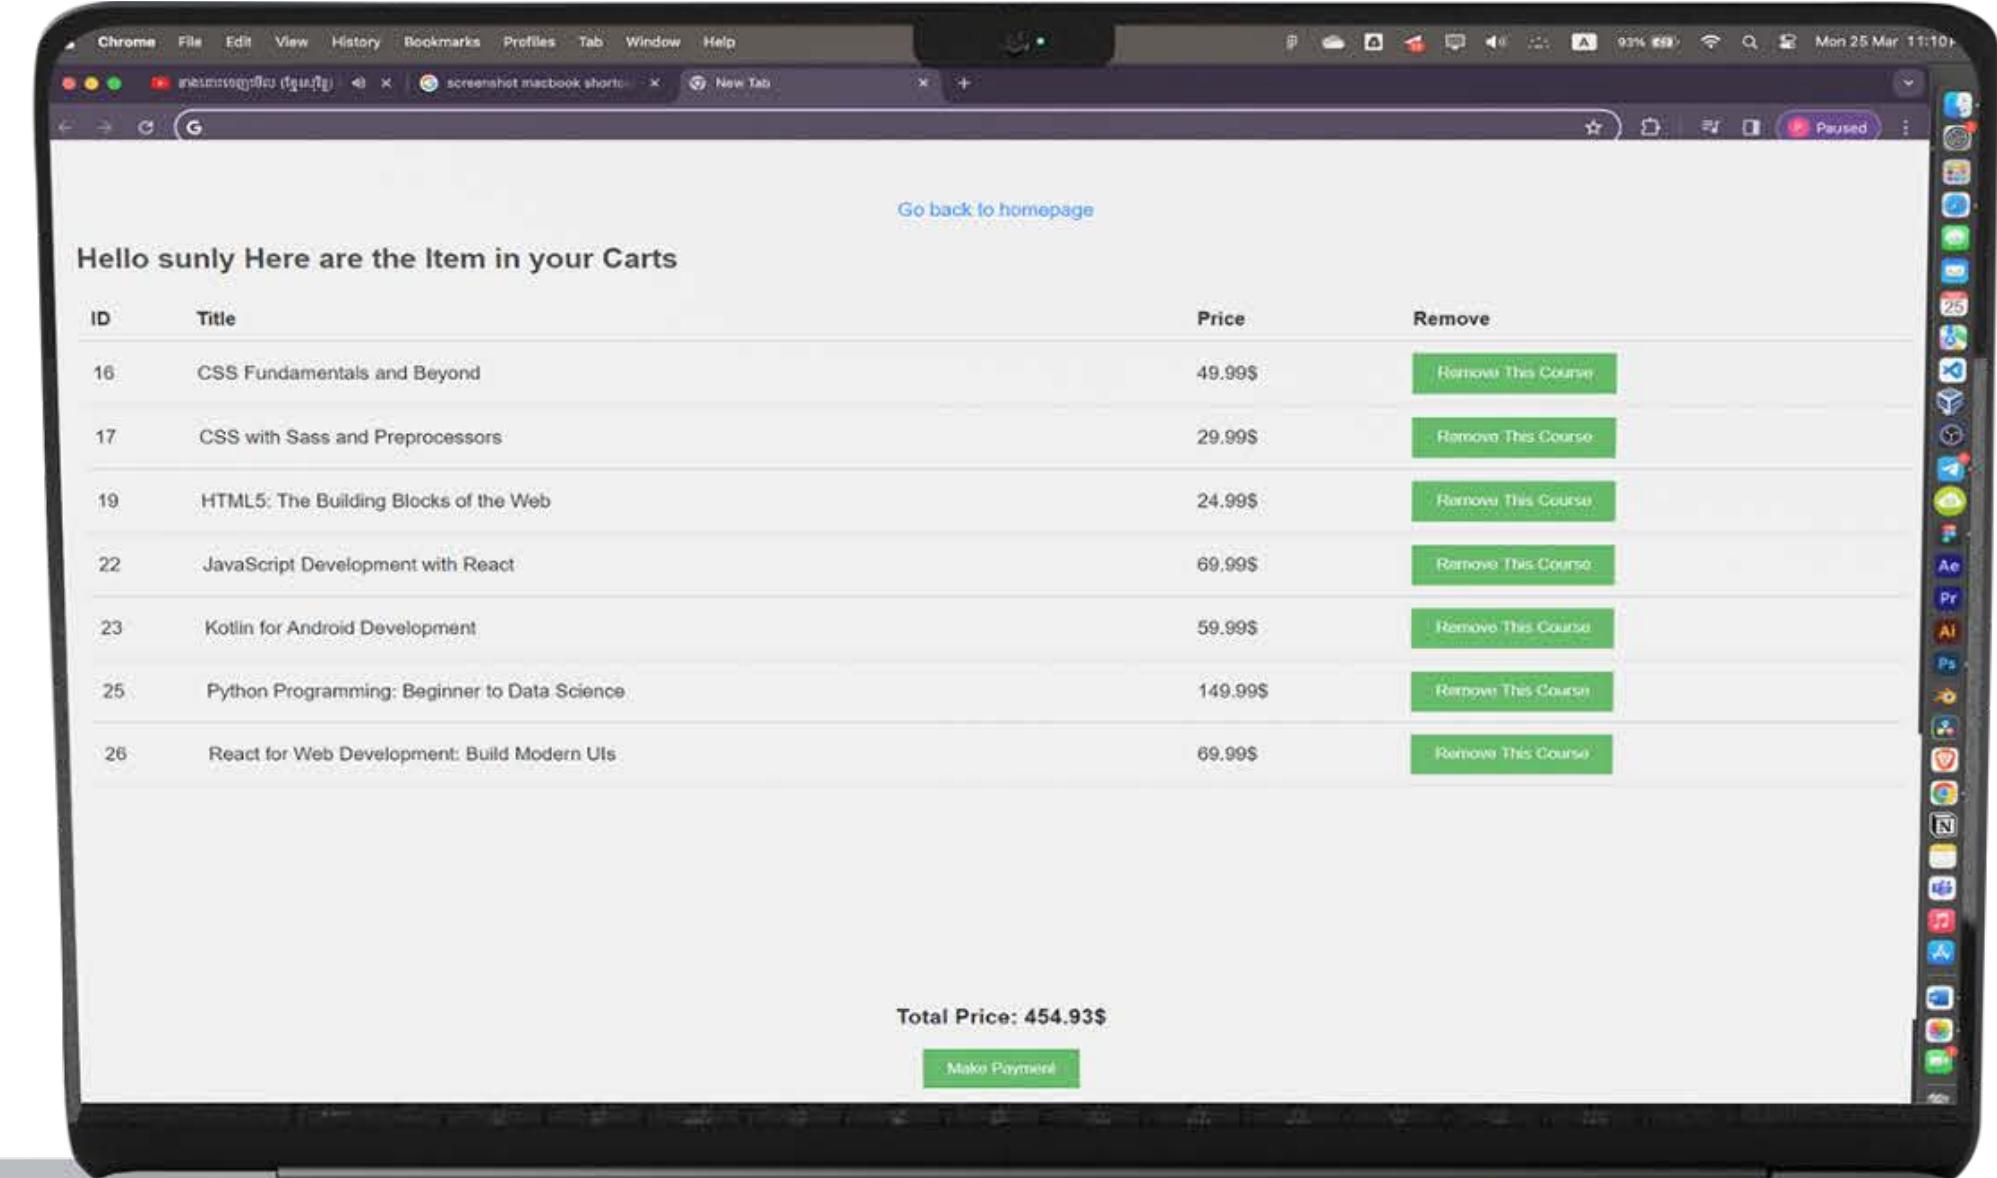

- Registered User can keep track of all their courses in Cart  
They can log off and come back to the same cart

## Objective

# User Check Cart

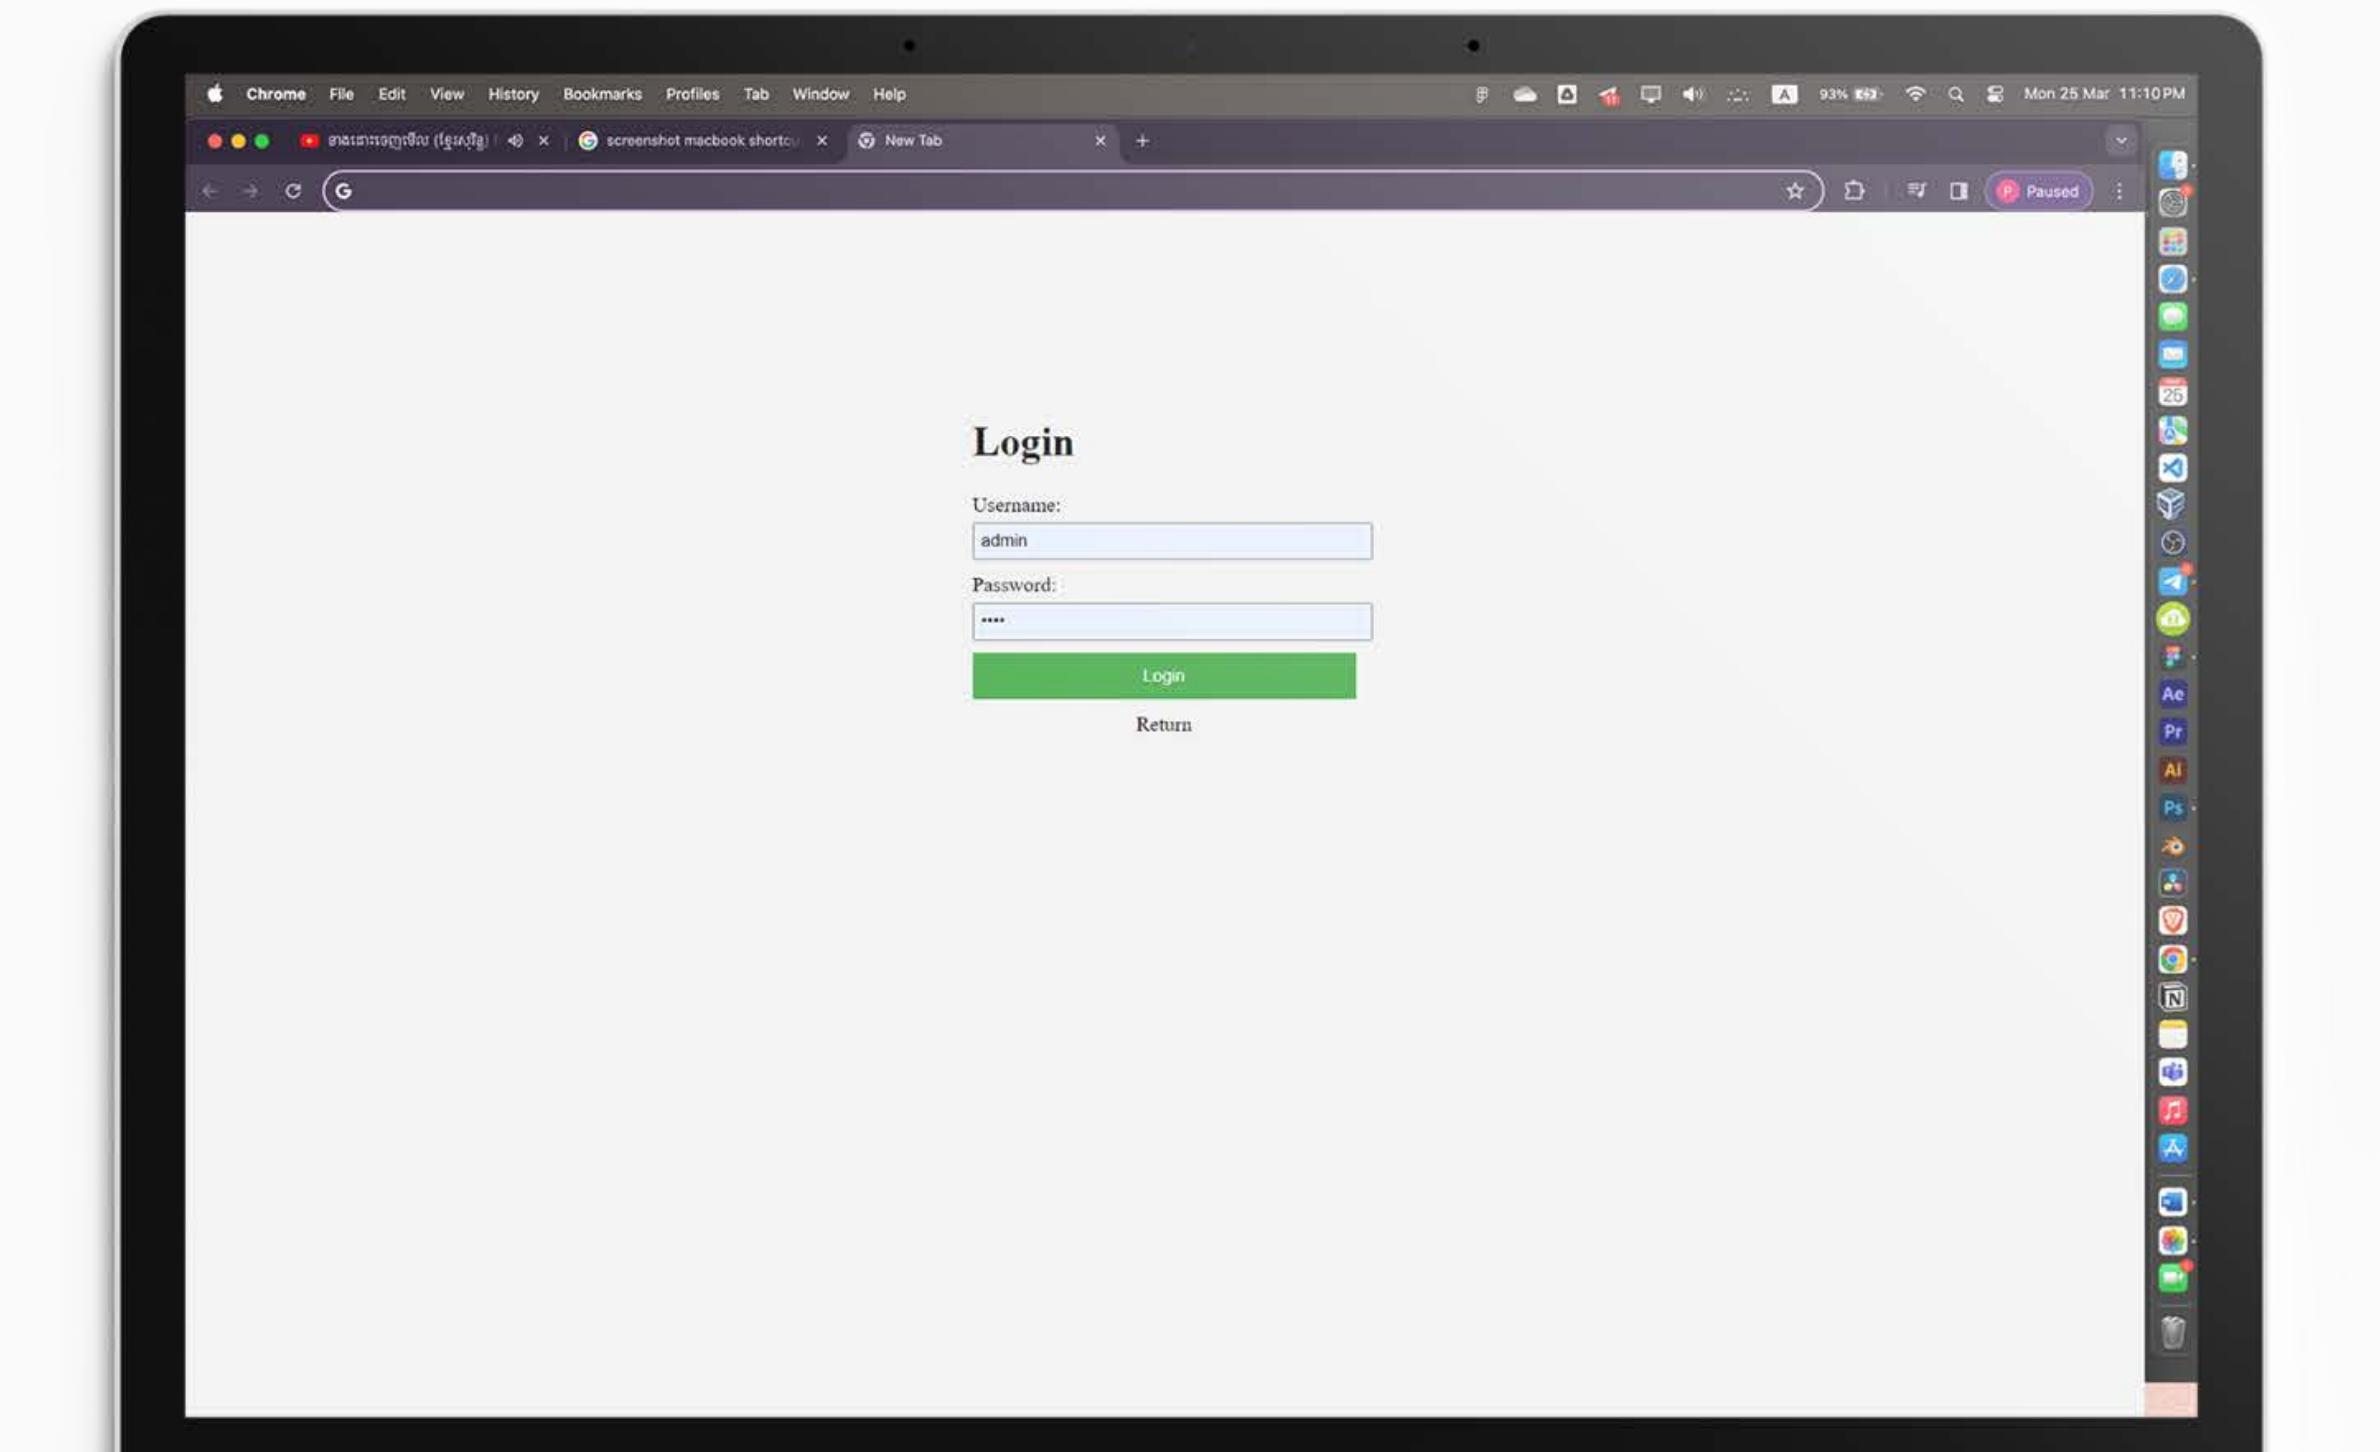

- User can check the total price of their cart and remove item if needed before payment

## Objective

# Admin Login

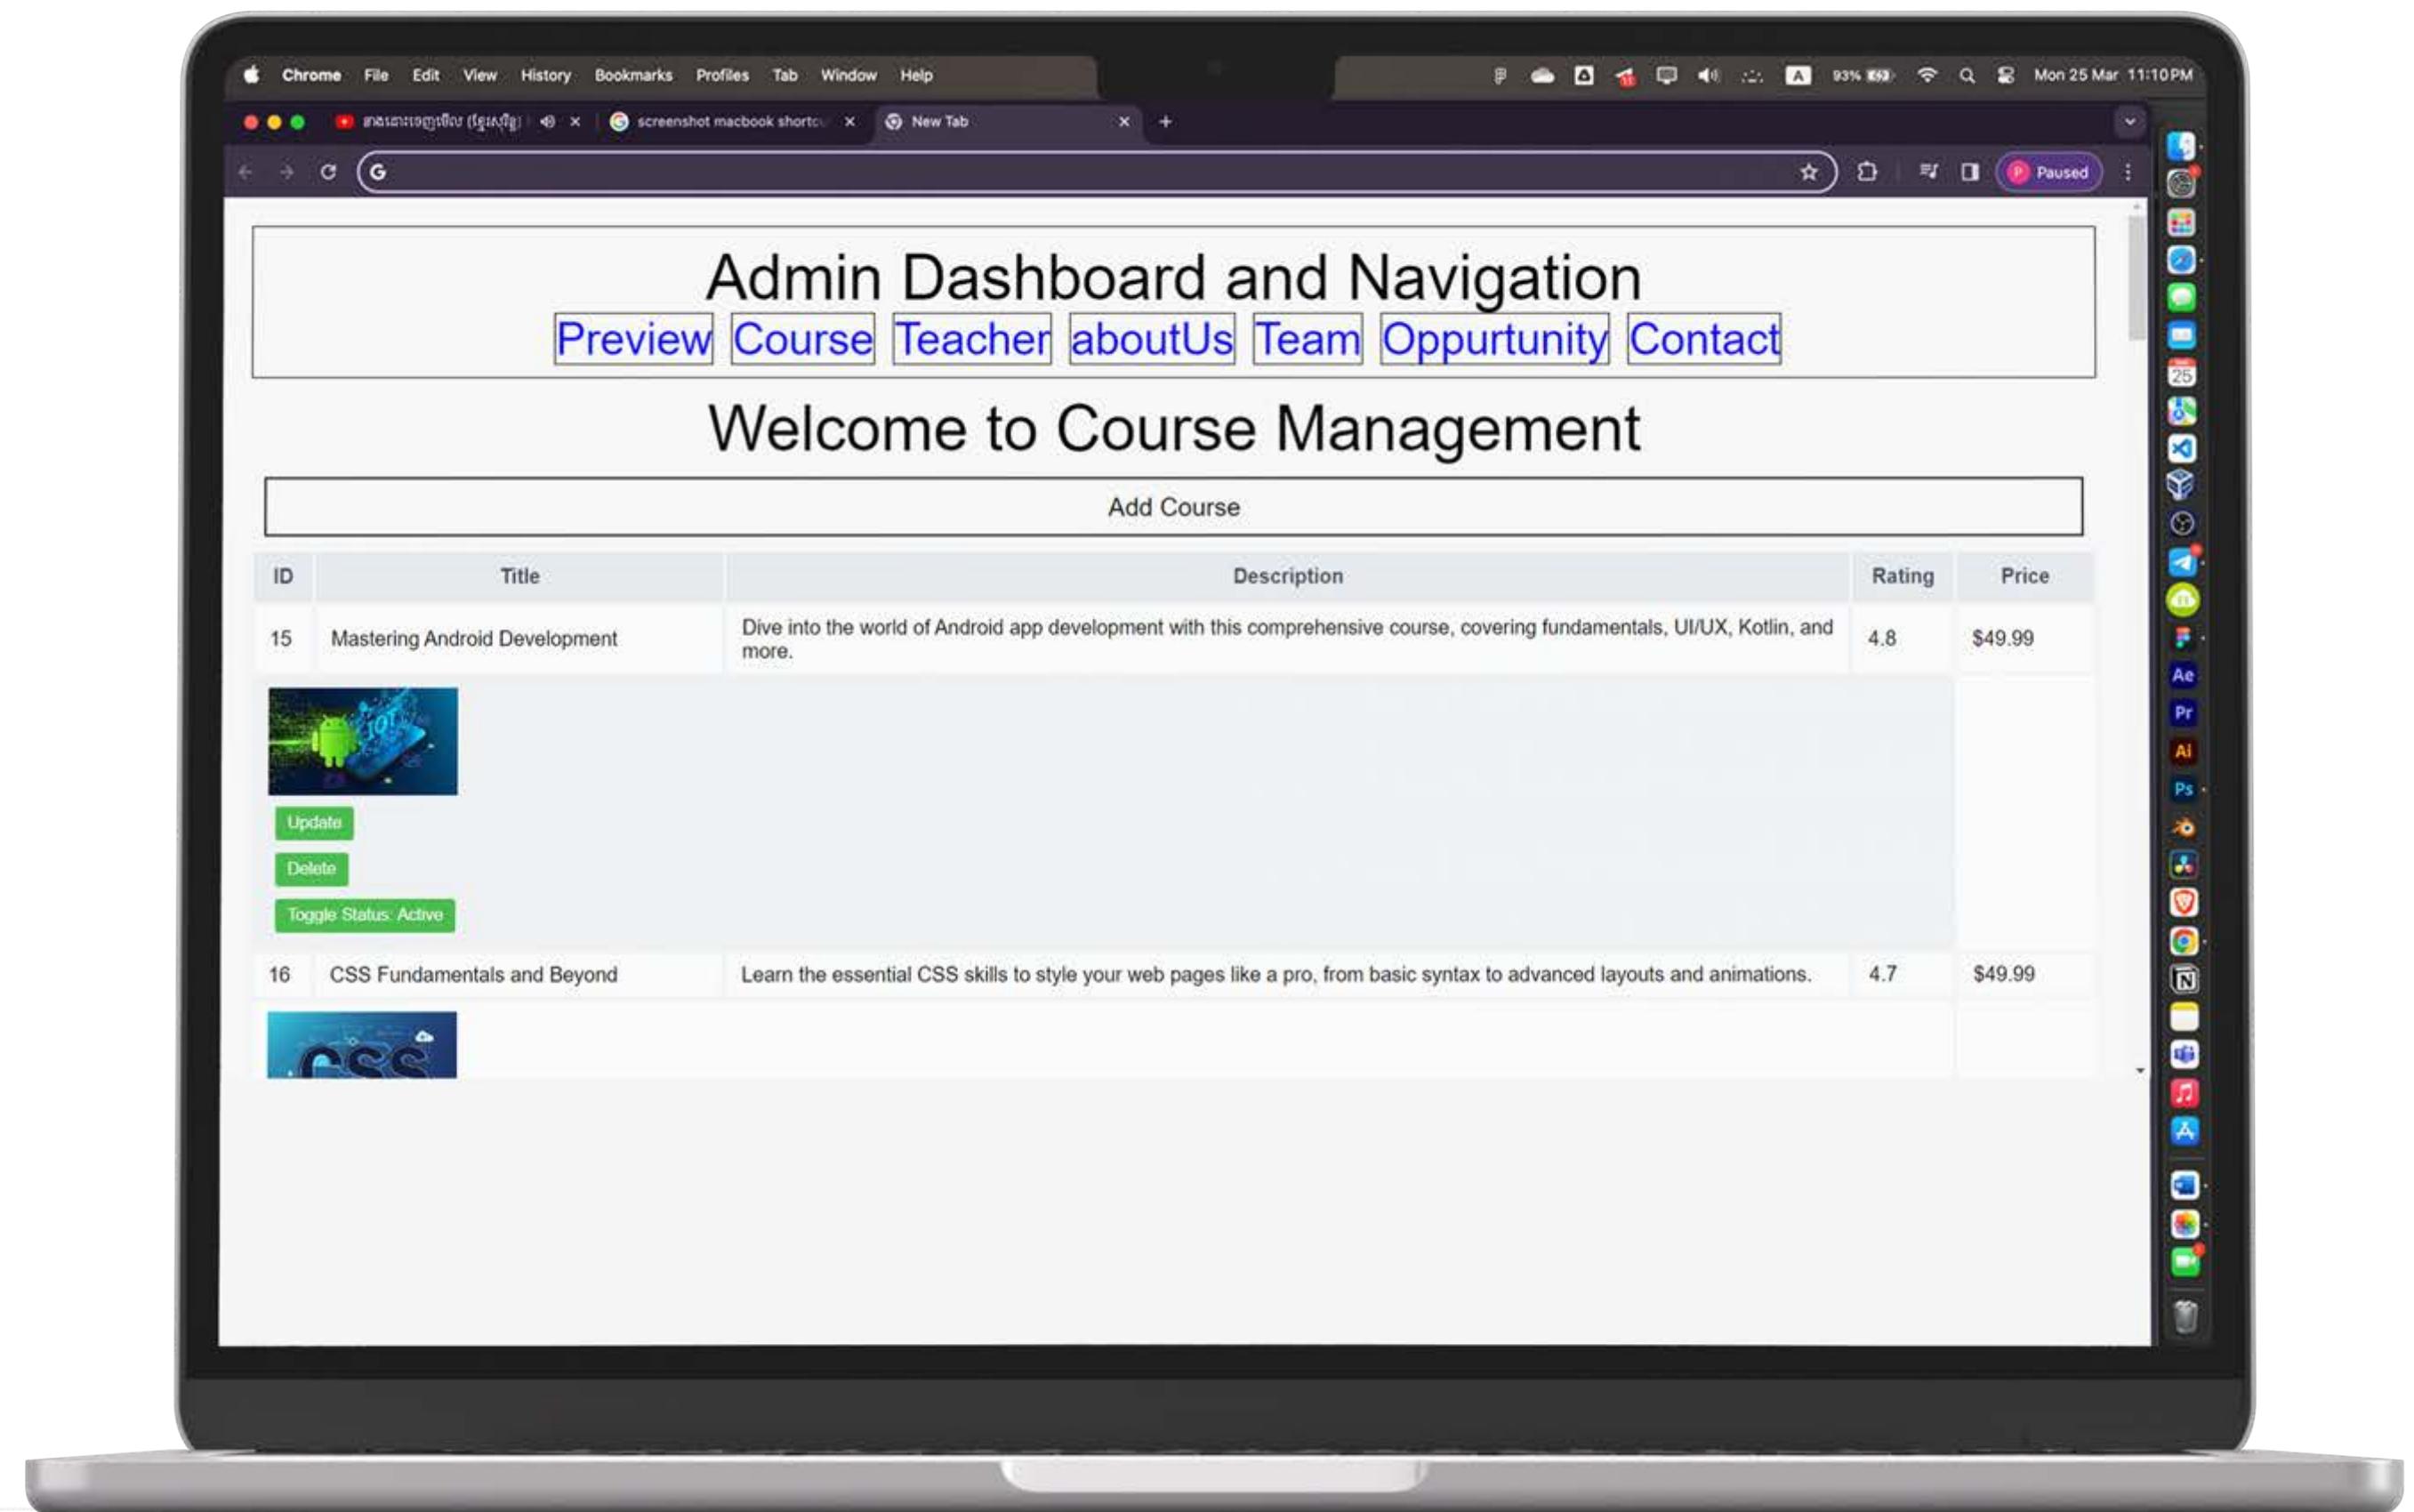

- Admin can login the same page as user but it will redirect to admin page for Admin credential

## Objective

# Admin Dashboard

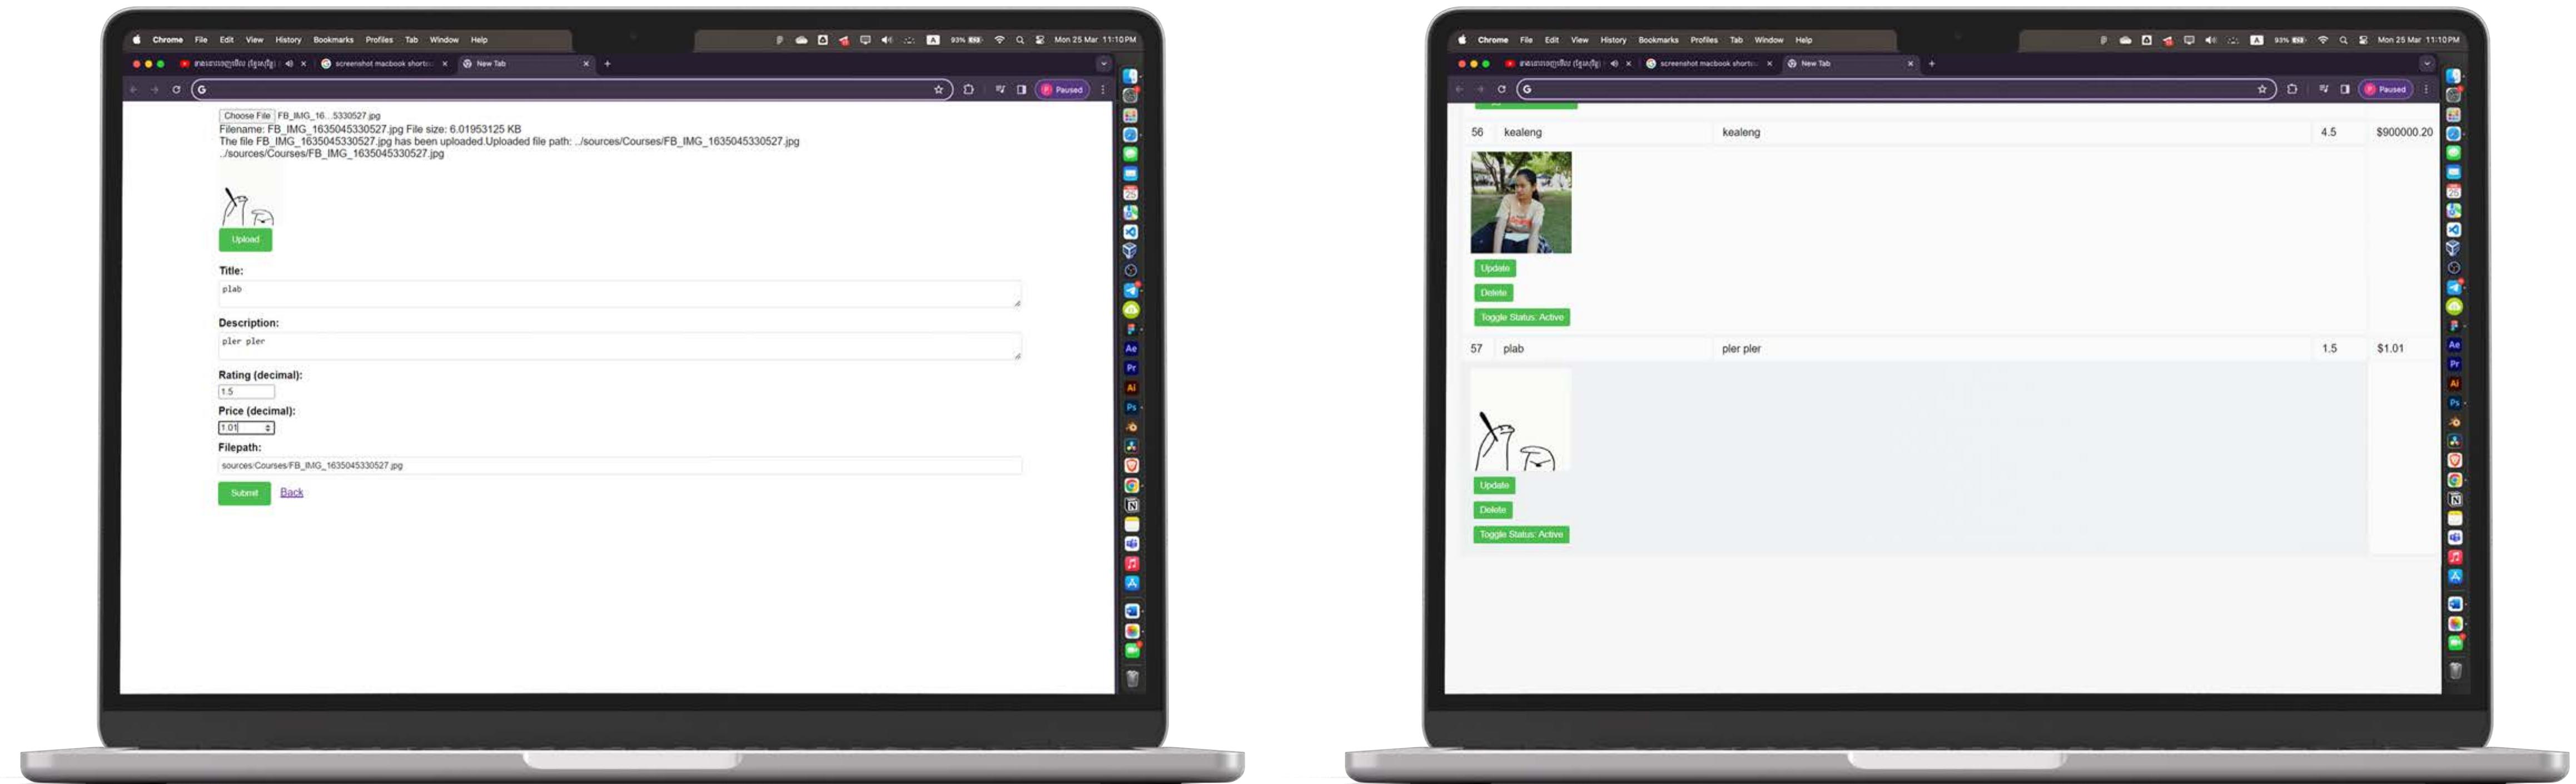

- Admin Dashboard and navigation to change the page to their current product and teacher

## Objective

# Admin add Item

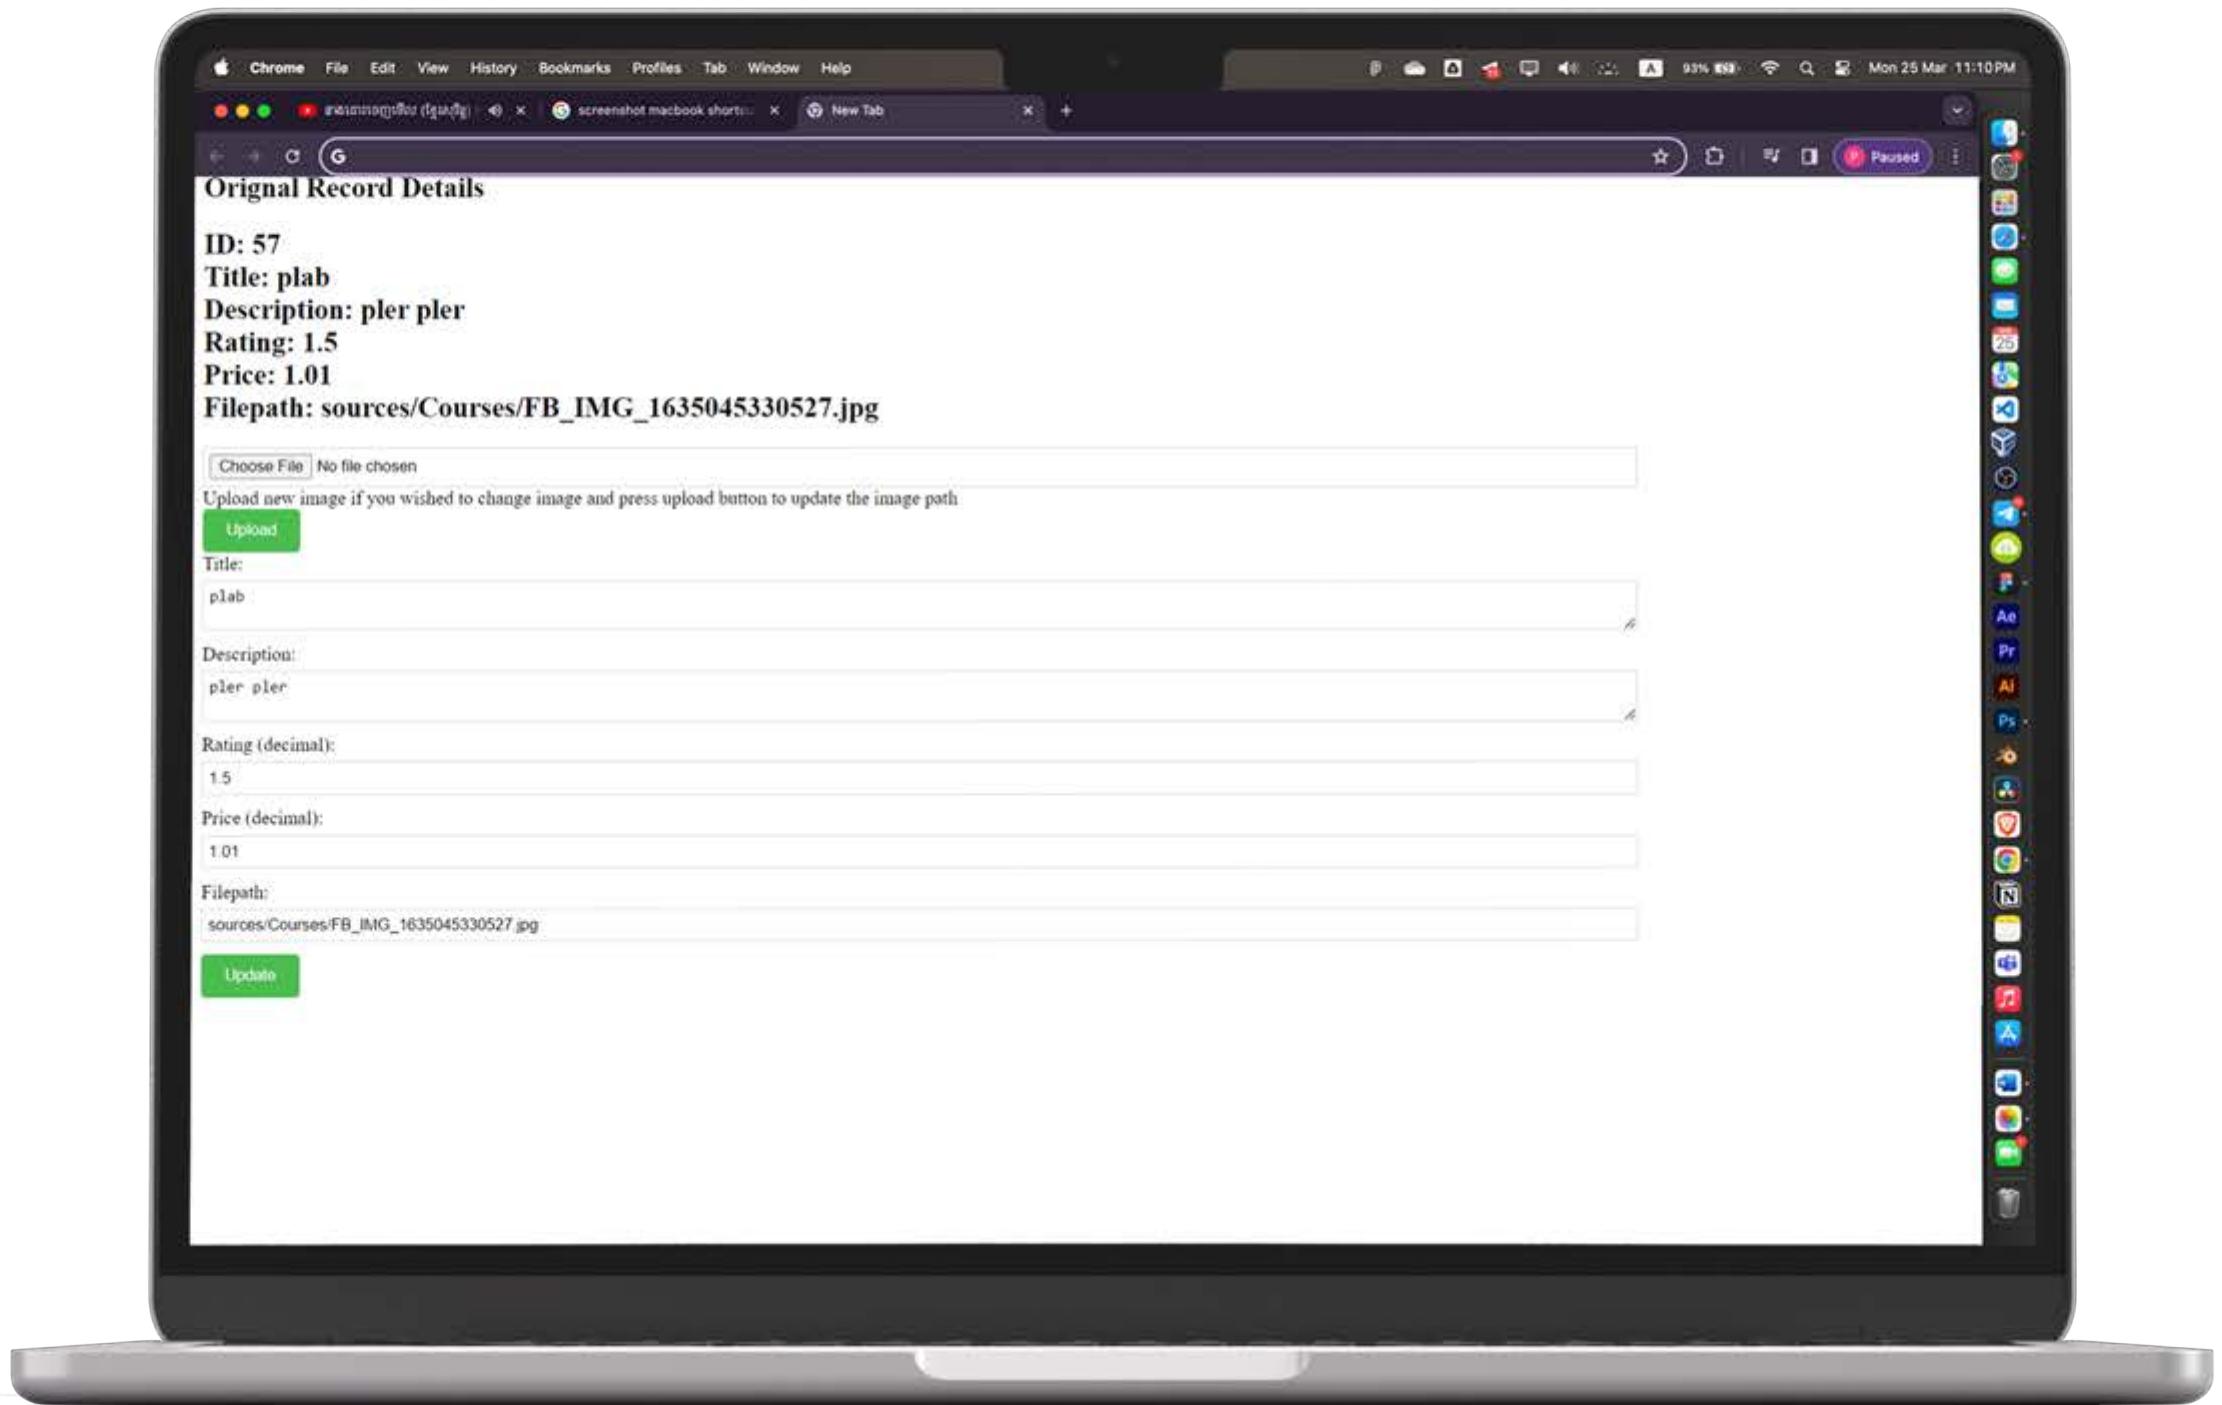

- Admin can add new product to their user easily

Objective

# Admin Edit Item

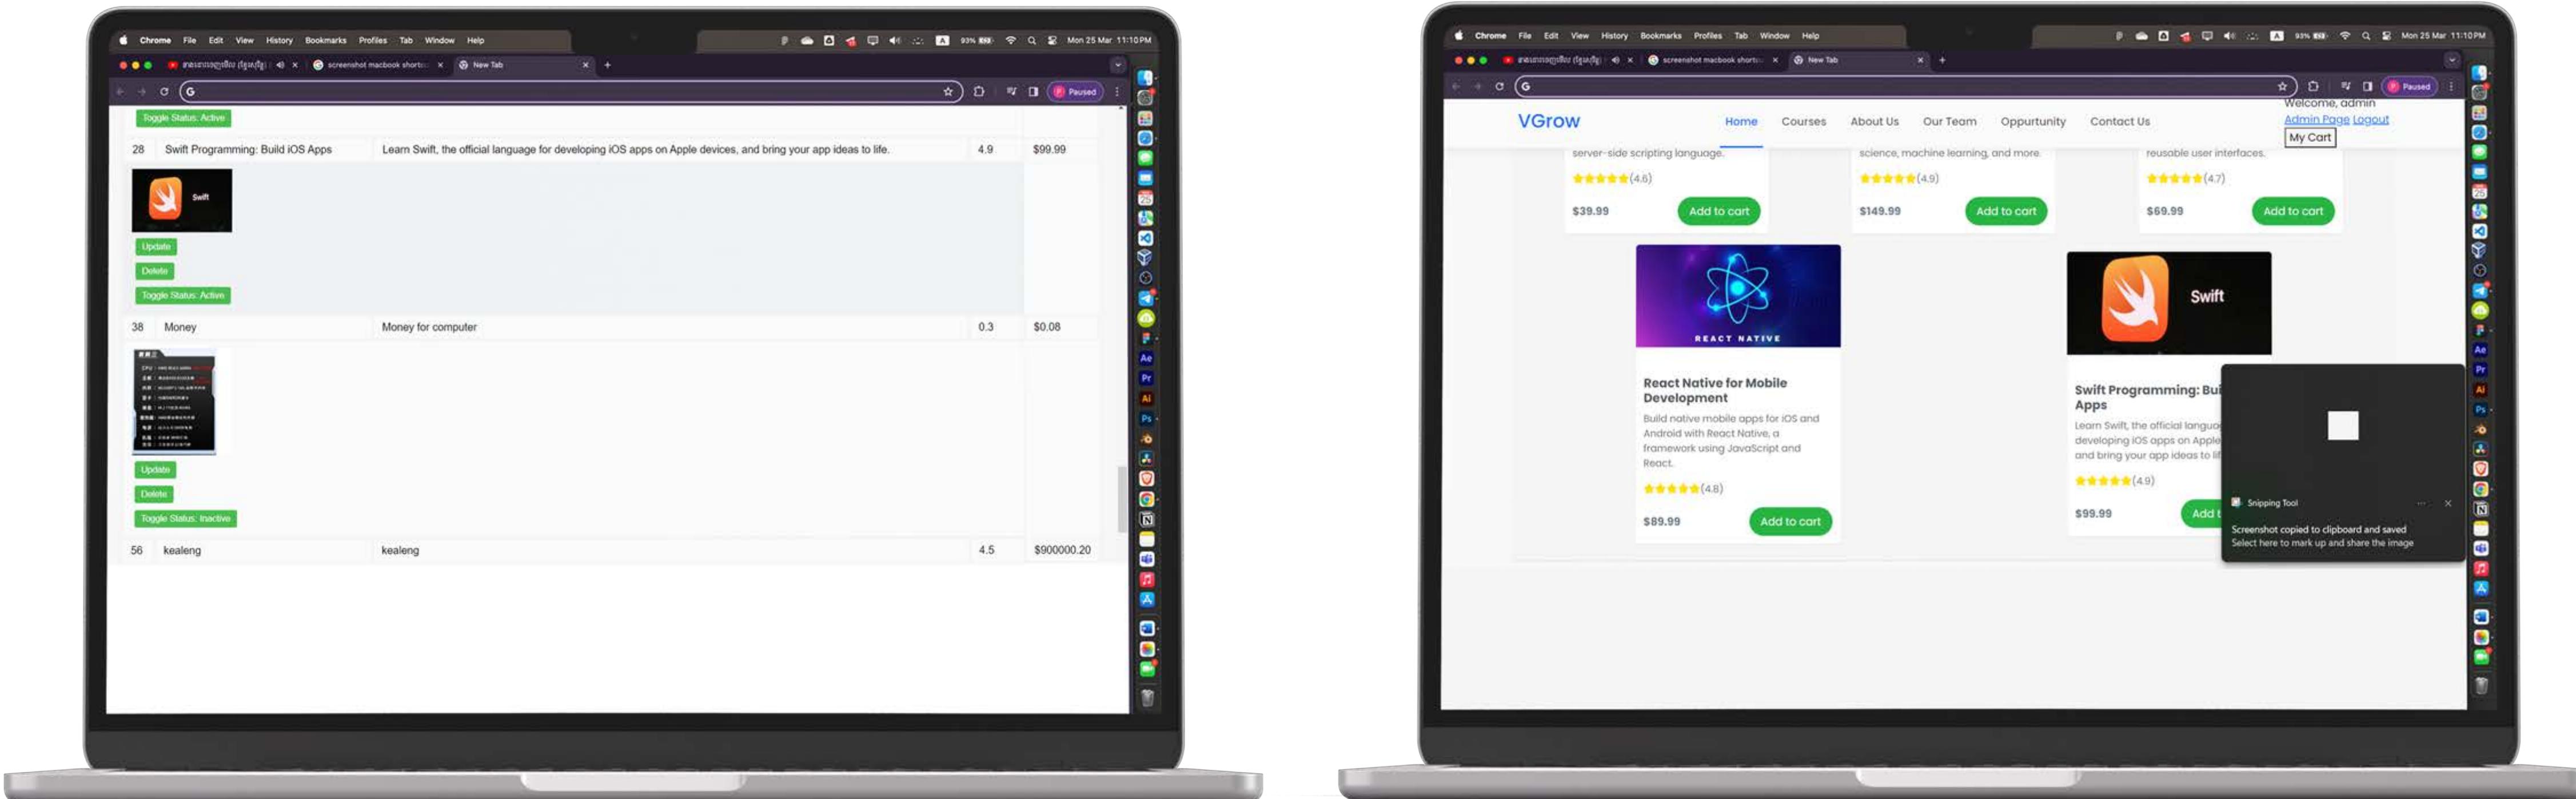

- Admin edit existing product

## Objective

# Admin Display On/Off

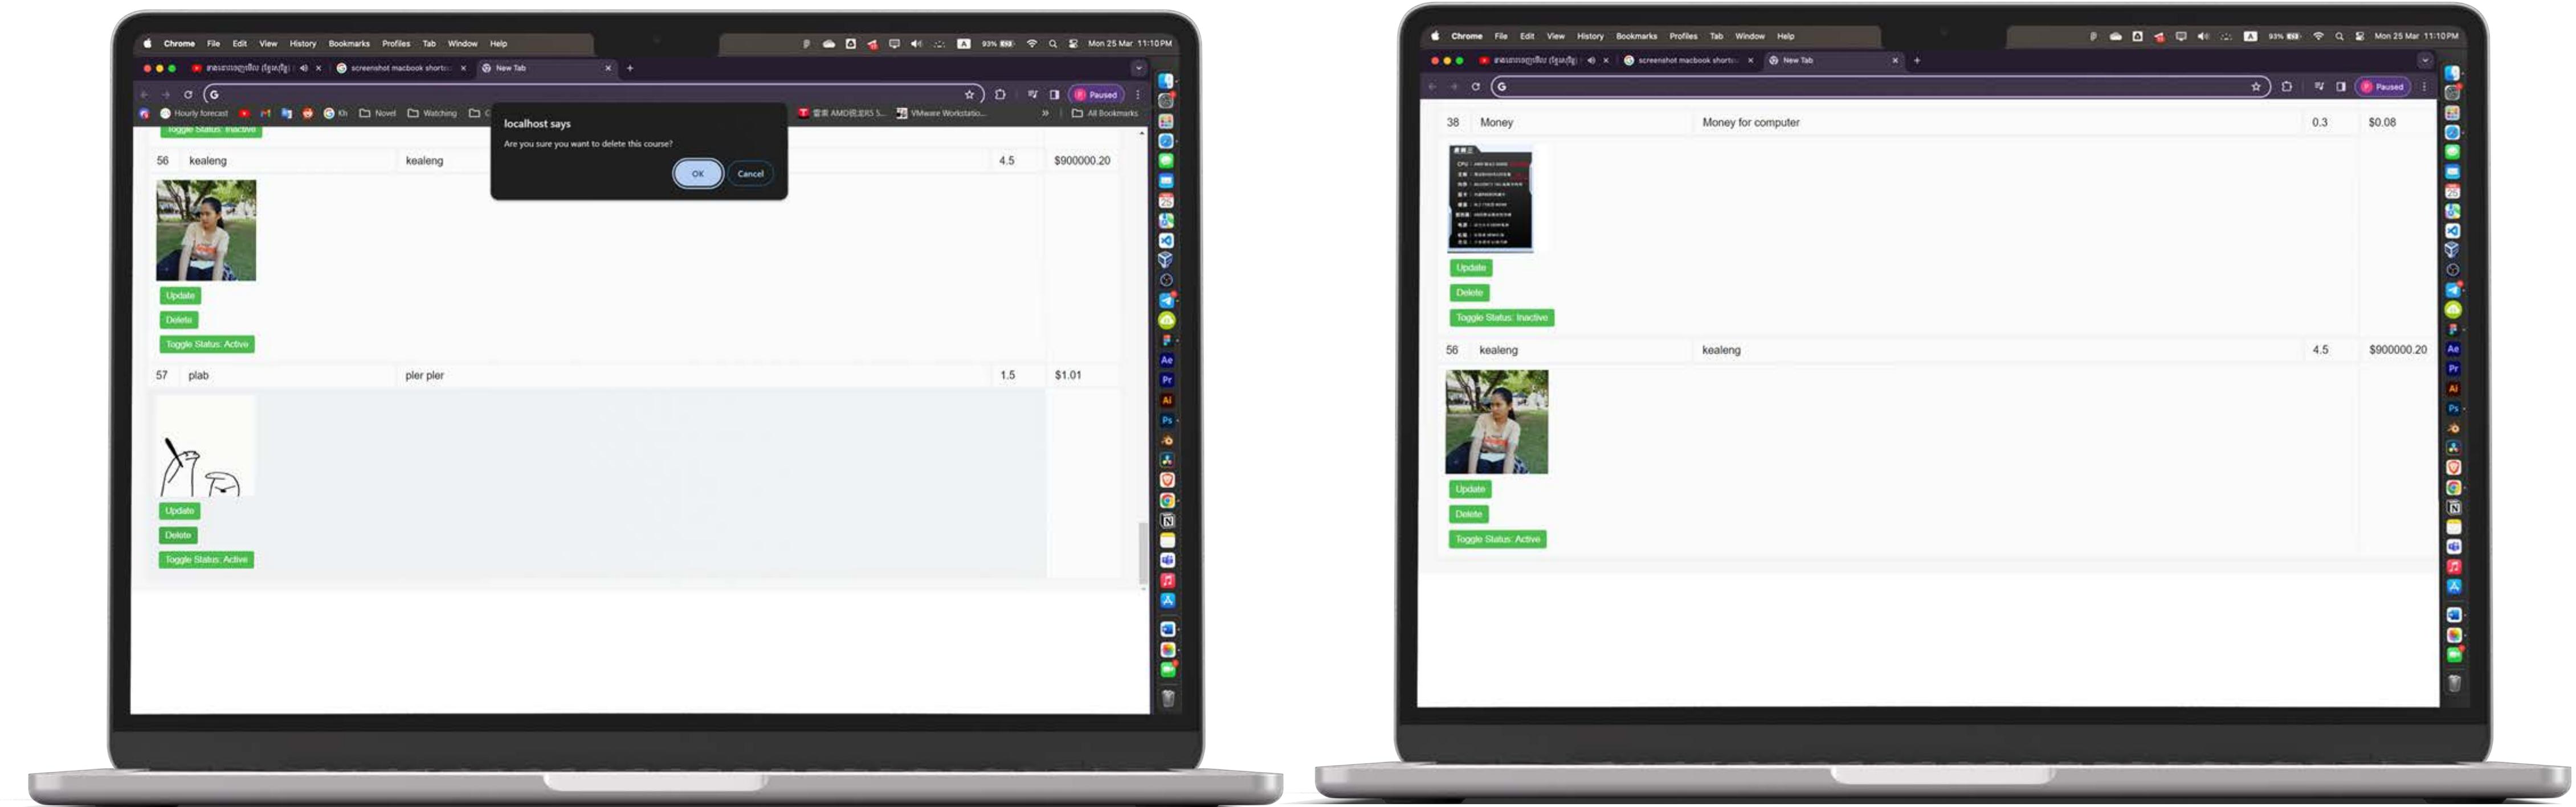

- Admin can chose to display product with just a button click

## Objective

# Admin Delete Item

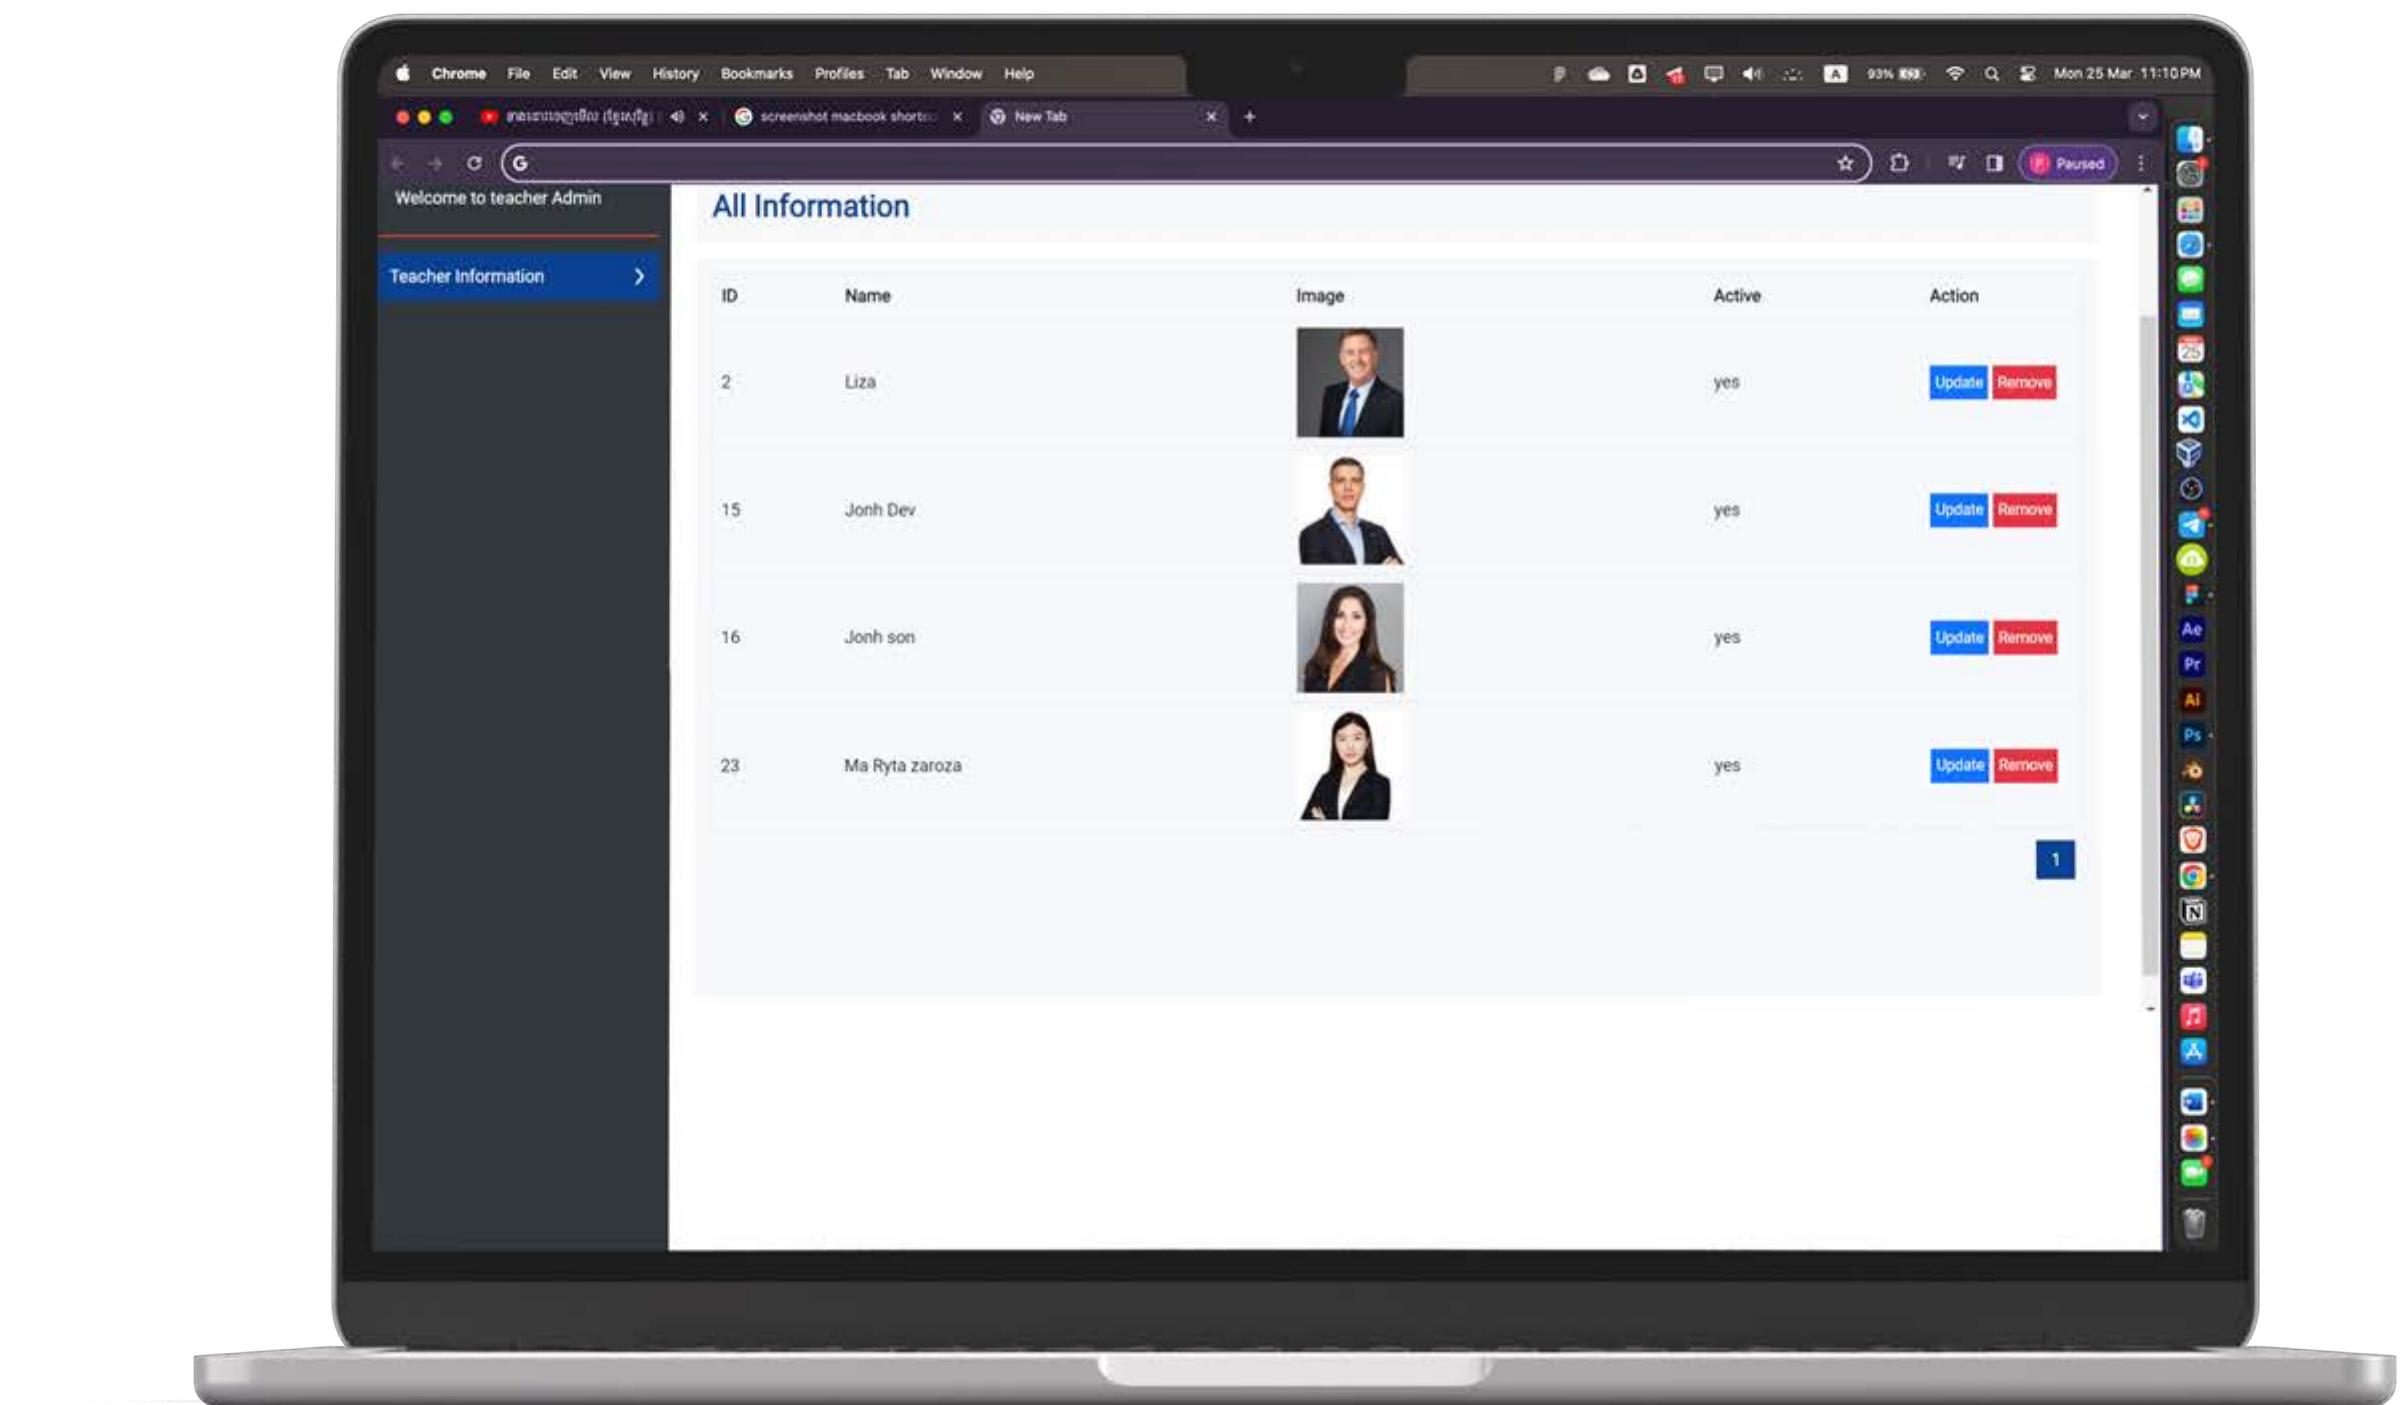

- Admin can delete product as easily with a just a click as well

## Objective

# Teacher Dashboard

- Admin can control teacher with same concept and ease as product/courses shown before

## Objective

# User Side

- What User See
